

Official Performance Benchmark of

Africa Private Equity & Venture Capital Index and Selected Benchmark Statistics

September 30, 2015

CAMBRIDGE

ASSOCIATES

- ◆ The Africa Private Equity & Venture Capital Index is comprised of 49 funds focused on private equity and venture capital investments in Africa. The funds had a total capitalization of over US\$11 billion as of September 30, 2015. The index includes pan-African, regional, and country-specific funds (13 of which are focused primarily on South Africa).
- ◆ The following asset classes are included in the index: buyouts (12 funds), growth equity (33 funds), mezzanine (2 funds), and venture capital (2 funds). Funds investing primarily in real estate, forestry, and/or infrastructure are not included in these statistics.
- ◆ Investment-level data includes investments made in Africa by Africa-focused funds noted above, as well as other private equity and venture capital funds in the Cambridge Associates global private investments database. Individual investments were headquartered or had their primary domicile in 32 different African countries or abroad.
- ◆ This index was first launched in April 2013 after substantial outreach efforts to Africa-focused general partners undertaken by the African Private Equity & Venture Capital Association and Cambridge Associates. Cambridge Associates thanks and acknowledges AVCA and its participating fund managers for their assistance in the development of the index and their ongoing provision of data.

Note on Performance Database Changes

Our goal is to provide you with the most accurate and relevant performance information possible; as a result, Cambridge Associates' research organization continually monitors the constantly evolving private investments space and its fund managers. When we discern material changes in the structure of an asset class and/or a fund's investment strategy, it is in the interest of all users of our benchmark statistics that we implement the appropriate classification realignments.

Our private investments performance database will reflect any such adjustments, as well as any changes to the underlying pool of contributing funds. As a result, you may notice quarter to quarter changes in the results of some historical benchmark return analyses.

Description of Performance Measurement Methodology

Cambridge Associates LLC (CA) has established a database to monitor investments made by venture capital and other alternative asset partnerships. On September 30, 2015, 49 Africa private equity funds and venture capital funds from the years 1995 through 2013 were included in the sample. Users of the analysis may find the following description of the data sources and calculation techniques helpful to their interpretation of information presented in the report:

1. Partnership financial statements and narratives are the primary source of information concerning cash flows and ending residual/ net asset values (NAV) for partnerships.
2. Recognizing the alternative asset community's sensitivity to the distribution of information pertaining to individual fund investments, as a matter of policy CA only releases aggregated figures in its benchmark report.
3. CA uses both the internal rate of return and the end-to-end performance calculation in its benchmark reports:
 - a. The internal rate of return (IRR) is a since inception calculation that solves for the discount rate, which makes the net present value of an investment equal to zero. The calculation is based on cash-on-cash returns over equal periods modified for the residual value of the partnership's equity or portfolio company's NAV. The residual value attributed to each respective group being measured is incorporated as its ending value. Transactions are accounted for on a quarterly basis, and annualized values are used for reporting purposes. Please note that all transactions are recorded on the 45th day or midpoint of the quarter.
 - b. The end-to-end performance calculation is similar to the IRR, however it is measuring the return between two points in time. The calculation takes into account the beginning NAV as the initial investment. The subsequent quarterly cash flows and the ending NAV for the specified time period (i.e. one quarter, one year, etc.) are utilized in the same fashion as the IRR calculation. All returns greater than one year are annualized.
5. Additional Definition:
 - a. **Pooled return** aggregates all cash flows and ending NAVs in a sample to calculate a dollar-weighted return.
